

Module 9: Dashboard

What is a Dashboard?

A dashboard is a visual interface that displays business metrics, charts, and reports in one place to help users make informed decisions.

1. KPI Cards

KPI (Key Performance Indicator) cards display important business metrics at a glance.

Examples:

- Total Sales
- Total Customers
- Profit
- Orders

2. Charts

Charts visualize data to identify trends and comparisons.

Common Charts:

- Bar Chart
- Line Chart
- Pie Chart
- Area Chart

3. Business Reports

Reports summarize business performance over a specific period.

Examples include monthly sales reports, employee reports, and inventory reports.

4. Business Insights

Insights explain what the data means and help businesses take action.

Example:

- Sales increased by 15% in July.
- South region generated the highest revenue.
- Electronics contributed 45% of total sales.

Sample KPI Table

KPI	Value
Total Sales	■12,50,000
Orders	1,250
Customers	840

Profit	■2,10,000
--------	-----------

Key Takeaway: Dashboards combine KPI cards, charts, reports, and insights to help organizations monitor performance and make data-driven decisions.
